MEMORANDUM FOR THE RECORD

SUBJECT: DS&T Space Planning

1. At a recent meeting of the Agency Configuration Management Board it was decided that ODE would not move into the new building at Langley and that consideration would be given to consolidating certain DS&T offices. The purpose of this memorandum is to document the DS&T understanding of location options under consideration and to identify those DS&T elements to be considered for consolidation.

2. In response to the Board decision D/OL has established a committee within OL to define location options. This committee is chaired by C/Home. During coming weeks the following location alternatives will be explored:

- a. single building or development complex,
- b. new construction at I-66 and the Vienna Metro (special case of a, above).
- c. [] and additional space in that immediate area,
- d. [] and the new construction adjacent []

3. At this writing the DS&T elements to be consolidated are the Office of the DD, ORD, ODE, FBIS, and elements of OSO. While OL has planning data for the new building from each DS&T office which will presumably represent the initial statement of detailed requirements, each office will find an acceptable solution among the alternatives only to the degree that current requirements are satisfied. Each office can expect a requirements review with Home in the near future.

4. [] C/MS/DS&T [] is a DS&T single point of contact at this time. In accordance with discussions at the recent DS&T management conference DD/FBIS will assume a coordinating role for the Directorate on 1 November.
